“My opportunity was to get trending and reporting of our process information into a web-based system with powerful analytics for our engineers and process owners yet easy to use for managers and other occasional users.”

“Our plant has two major control systems, two different process historians, one lab system, and at least three different operator interface computer systems. Our CIO asked me to make sure that my solution would work for all locations.”

“Changing out all the operator interfaces to one system and installing a single process historian would be incredibly expensive and disruptive.”

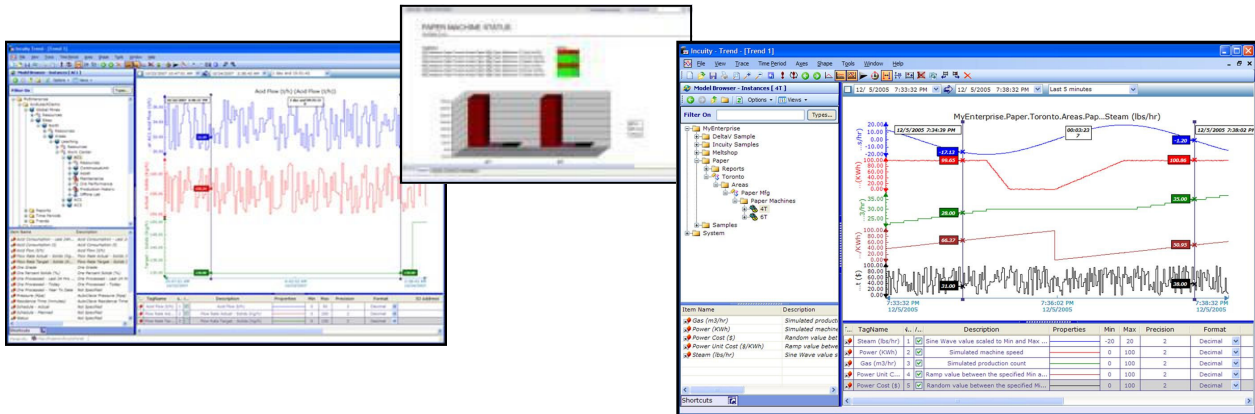

“I contacted Sylution Incorporated.”

“Sylution showed me a business intelligence solution that was built specifically for process and manufacturing companies. The system has best-of-breed trending, reporting with Excel, and dashboards. Importantly, it connects to any data control system, historian or database.”

“The system met or exceeded our needs for all plants.”

Sylution delivers web-based process trending and reporting solutions along with a platform for true business intelligence for users of OSI PI, INSQL, iFix Historian, S7 Historian, Aspen Tech, and more.
